

BACHELOR OF PUBLIC HEALTH

The Los Angeles Pacific University (LAPU) Bachelor of Public Health (BPH) mission is to enhance students' understanding of the core values and concepts of public health, along with its history and philosophy. Students receive a foundation of public health concepts and issues, including the essentials of public health services, epidemiology, developing and assessing public health, research methods in health sciences, and the role of artificial intelligence in healthcare. The goal is to develop public health leaders who are compassionate, ethically grounded, and motivated by a desire to make a positive impact in the world in alignment with Christian values.

Program Learning Outcomes (PLO) for the Bachelor of Public Health Degree

Graduates of the Bachelor of Public Health degree program will be able to:

- **PLO 1:** Evaluate personal and organizational ethics affecting public health decisions from a Christian worldview perspective.
- **PLO 2:** Demonstrate effective written communication of public health information
- **PLO 3:** Demonstrate effective oral communication of public health information.
- **PLO 4:** Critically interpret data to assess public health interventions and outcomes.
- **PLO 5:** Utilize critical thinking and systems-based approaches in public health research and its implications.
- **PLO 6:** Implement key public health competencies in addressing real-world health challenges.
- **PLO 7:** Promote diversity and cultural sensitivity in alignment with professional standards.
